

Primetech adds tough, versatile EasyTrac mobility mats to product range

Primetech has added the EasyTrac range of roll-up mobility mats to its product range. This will provide emergency services with a proven method for improving vehicle access and movement in difficult operating conditions.

The mats, which can support vehicle weights of up to 16 tonnes and above, have been tested under extremely rugged conditions and with very heavy vehicles. The mats, which are light in weight, are made of rugged plastic and available in a wide range of customisable colours (including fluorescent mats for night vision). They can be used to help vehicles of all kinds cross muddy, wet or other difficult ground (see the EasyTrac demonstration on You Tube).

The Standard size mat is 1m long x 600mm wide, but the width can be extended to a maximum of 1m if required at additional cost.

There are hundreds of different colours available, which can be mixed according to client requirements, at no extra cost, but there is a minimum order size. Company or organisation logos or names can also be included in mat designs, for an extra charge.

Mats are delivered either flat packed or in rolls of 10/15/20m ready to deploy.

Henry Walker, director of Primetech said: 'We are delighted to be able to offer the EasyTrac range of mobility mats to our extensive product range. These mats will give emergency services the ability to move their vehicles around incident grounds easily in the often-challenging conditions in which they find themselves, such as flooding or water-soaked ground. The mats are light but extremely tough, and with the wide range of colours and fluorescent marking will make it much easier for emergency service vehicles to operate over rough and wet ground.'

ABOVE LEFT EasyTrac mats come in a range of sizes and are delivered either flat packed or in rolls of 10/15/20m ready to deploy.

CENTRE EasyTrac mats are light but extremely tough. There is a wide range of colour options and fluorescent marking, making it much easier for emergency service vehicles to operate over rough and wet ground and in the dark.

ABOVE EasyTrac mobility mats provide emergency services with a proven method for improving vehicle access and movement in difficult operating conditions.

Range of Mat sizes

- Standard (50) Weight of 1m mat- 3.5kg. Max usage 8 tonnes;
- Strong (60) Weight of 1m mat- 4.8kg. Max usage 12 tonnes;
- Extra strong (70) Weight of 1m mat- 5.0kg. Max 16 tonnes;
- Customisable up to 100 tonnes.

Primetech's EasyTrac mobility mats help Derian House hospice save £5000

Primetech's EasyTrac mobility mats, which can provide improved wet weather and damp ground access for vehicles of all sizes, have been used recently to help a charity maximise its fund raising efforts by avoiding losing a bond deposit for a major charity event.

Derian House, a hospice for children and young people based in Chorley, Lancashire was able to protect its ground damages bond of £5000 by ensuring it accrued no financial penalties at a major charity fundraising event held in November.

The Winter Sparkle Spectacular, held at Astley Park, Chorley is a regular and important source of income for the charity, which requires almost £4million per year to fund its valuable work supporting children and families at times of great stress. A large number of vehicles, some quite large, were required to support the event. These included a mini fairground (Helter Skelter, Carousel, Bungee trampoline, Snow-globe) plus a variety of catering trailers.

The local council required a bond of £5000 to cover any damage done by these vehicles moving onto and parking on grass. Derian House approached Primetech to see if they could help with the new EasyTrac range of protective matting, launched at the Emergency Services Show in September this year.

Henry Walker of Primetech was delighted to help, and several sets of mats were delivered and set up by a Primetech team to help vehicles move into position without damaging grassed areas within the park.

Weighing just 5kg per mat, the 600 mm wide, 70mm thick Extra Strong mats can easily carry loads of up to 16 tonnes and were very well suited to preventing large vehicles from damaging the lawns. After a post-event inspection there was judged to be no damage to the grassed areas and the charity received its £5000 bond back in full, a significant amount when the event raises around £20,000

Judy Miller, Community and Events Fundraiser for Derian House hospice said: "Our Winter Sparkle Spectacular is our annual Traditional Christmas Market event which attracts 1000's of people from all over the county. It was an essential new requirement by Astley Park, Chorley Council to protect their grounds by placing a monetary bond to help with their sustainability and to mitigate any damages caused from heavy vehicles on the day.

'Thanks, to discovering and then speaking with Henry Walker from Primetech, we were able to source a product that gave strong protection to the grounds at Astley Park and therefore no damage was incurred and the bond was returned in full. We were more than happy with the service and outcome of this product and have no hesitation in highly recommending Primetech as a company who went above and beyond our requirements.'
